

Overview of “Next Generation SCADA/EMS”

Aim for the development of systems to ensure the following points:

- Consistency of supervisory control operation from the bulk transmission to the distribution system by developing the SCADA function for each operational purpose
- Flexibility for changing organizations by server consolidation
- Scalability by adopting international standards

Current monitoring control system

- ◆ Monitoring control with our original internet protocol.
- ◆ Install the server in each department’s control center.

“Next Generation SCADA/EMS”

- ◆ Change our original specifications to standard specifications in transmission system. (Standardization of network)
- ◆ Aim to be independent from particular organizations or locations by integrating servers into a server base.
