Fukushima Daiichi Nuclear Power Station Plant Parameters

As of 11:00 on March 22 2021

[Note]

Some indicators might not be functioning properly beyond the normal condition for usage affected by the earthquake and subsequent events. We comprehensively evaluate situation in plants using all the available information from indicators and also focusing on trends, taking uncertainty of indicators into consideration.

[Information about measurements]

※4: Nitrogen gas injection is under suspension.

^{*1:} In case that the instrument indicates minus hydrogen density, "0%" is recorded. (Because there's the possibility of minus indication due to the instrumental precision when hydrogen density is very low.)
The hydrogen concentration in the PCV gas control system is provided.

^{*3 :} Flow rate values are adjusted according to the temperature and the pressure under usage conditions.

^{35:} The primary coolant pump in the Unit 4 spent fuel pool is now stopped operation
