

<Marine Organism Rearing Log>

9 AM, August 23, 2022

Weather: Sunny

Water temperature: 18.0°C

Today, we are only making a text only announcement. As introduced in the log on August 19, the delivery of equipment for rearing marine organism in ALPS treated water diluted with seawater began on August 15, and most of the water tank equipment has been delivered by today.

Soon we will introduce our brand-new equipment incorporating our experience with mock-up tanks with photos.
