

<Marine Organism Rearing Log>

9 AM, August 24, 2022

Weather: Sunny

Water temperature: 17.8°C

Equipment installation status of rearing test. (within controlled area)①

Rearing test requires approx. 30t of seawater which was carried in the controlled area starting yesterday. The seawater is filtered and stored in the white containers shown in the photo temporarily and then the tanks are filled with water in sequence, starting with the tanks that have been installed.

Temporary containers of seawater

Containers for decomposing and purifying seawater containing extremot or residue with ozone

The tanks to rear the marine organism
