

<Marine Organism Rearing Log>

9 AM, September 13, 2022

Weather: Sunny

Water temperature: 18.2°C

We have started rearing training prior to adding ALPS treated water at the controlled area. We accepted approx. 800 of the flounders in these two days (yesterday and today), and then release them into rearing test tank which is equipped in the controlled area after saltwater bathing. Since the flounders have been hatched this spring and be still as big as palm so “it’s so adorable”.
