

## <Marine Organism Rearing Log>

9 AM, September 15, 2022

Weather: Sunny

Water temperature: 22.1°C

The flounders are full of life in the tank even under stress of transfer and saltwater bathing. Until they moved in, they had been kept in a natural seawater environment, so we have set the water temperature to 22°C. However, we are going to lower the temperature before their roommates, abalones, to join in the tanks.
