

<Marine Organism Rearing Log>

9 AM, September 26, 2022

Weather: Sunny

Water temperature: 18.3°C

About 1,000 flounders which we start rearing from last week are feeding actively without any dead individuals. (The video shows the juniors in the rearing training tank.) The big brothers and sisters in the downstream which are fed after the little ones have also more appetite than usual. There must be pleasant aroma from upstream.

Watch the video on our Twitter (only in Japanese):
