

<Marine Organism Rearing Log>

9 AM, September 27, 2022

Weather: Sunny

Water temperature: 18.3°C

We set up the sign at the entrance of “Marine Organism Rearing Test” facility where we rear flounders and abalones in seawater added ALPS treated water in the controlled area. In order to reduce stress of the flounders and the abalones, the lighting is rather dark so that the sign is buoyant.

↑It says “Marine Organism Rearing Test” in Japanese
