

<Marine Organism Rearing Log>

9 AM, September 28, 2022

Weather: Sunny

Water temperature: 18.1°C

We made an arrangement of the equipment using for to stream live rearing test. We will start airing with 3 cameras on YouTube Live. We set up the camera as follows: one long shot camera for overview of the facility, another is underwater camera in the regular seawater, and the last is underwater camera in the ALPS treated water diluted with seawater.

The light will be off in the night for considering stress of the flounders.
