

<Marine Organism Rearing Log>

9 AM, September 29, 2022

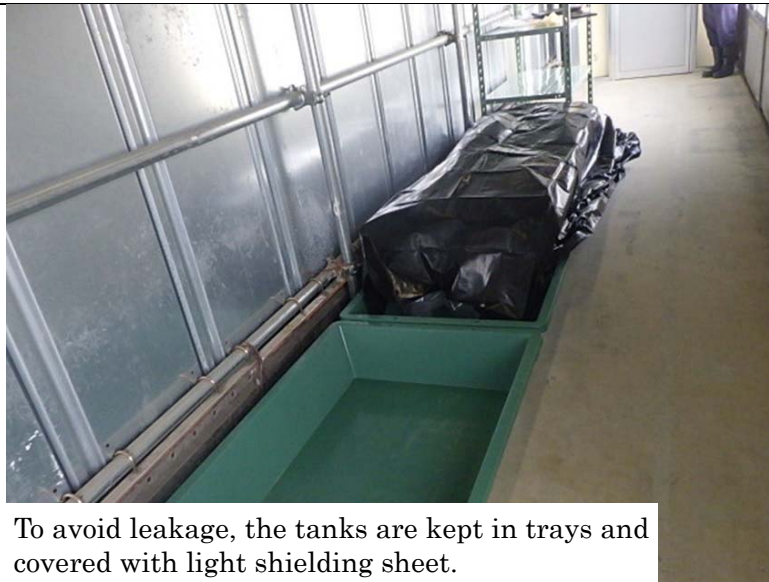

Weather: Sunny

Water temperature: 18.8°C

ALPS treated water for rearing training (15 poly tanks of 20L) were brought into the rearing test facility, yesterday. Tritium concentration of ALPS treated water is 150,000 ~ 210,000 Bq/L and will be diluted with hundredfold of rearing seawater. We are rearing marine organisms in the seawater of 1,500 Bq/L.

ALPS treated water (15 poly tanks of 20L)

To avoid leakage, the tanks are kept in trays and covered with light shielding sheet.
