

<Marine Organism Rearing Log>

9 AM, October 11, 2022

Weather: Cloudy

Water temperature: 19.7°C

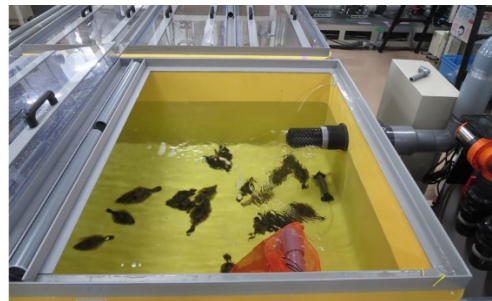

Day 7: since the start of tritium concentration verifying test of the flounders' bodily fluids. Today, after sampling in the morning, we transferred the rest of the flounders to regular seawater tank. We are taking samples as last time to verify the decrease of tritium amount in their bodily fluids.

10:00

The flounders transferred from the tank of tritium concentration 1,500Bq/L to regular seawater tank.

About 30 flounders transferred to regular seawater tank

13:00 (3 hours after transferred)

Took out 5 flounders as samples for tritium concentration measurement in their bodily fluid

Preparation for sample

Cut the flounders into fillets into 5 pieces, put edible parts of each flounder into a plastic bag, then deep-freeze.
