

<Marine Organism Rearing Log>

9 AM, November 11, 2022

Weather: Sunny

Water temperature: 17.6°C

A difficult story for today again. Bacteria is growing favorably that disassembles nitric acid. Growing status is determined by oxidation-reduction-potential of seawater and it declined to -30mV from 200mV at first stage. It might decline to -150mV to be able to step forward to next process some time in today or tomorrow. Comfortable environment is almost there.

(Next report will be on November 14, 2022)
