

<Marine Organism Rearing Log>

9 AM, November 22, 2022

Weather: Sunny

Water temperature: 18.2°C

In flounders and abalones bodies, the edible part (mainly muscles) will be used for tritium concentration measurement, however, the inedible parts (head, bones of the flounders or mouth of the abalones) will be piling up as garbage. So we set a garbage disposal at the corner of the facility to for volume reduction of the garbage.

<Next report will be on November 24, 2022>
