

<Marine Organism Rearing Log>

9 AM, November 30, 2022

Weather: Cloudy

Water temperature: 18.1°C

Verifying test of tritium concentration in bodily fluid of flounder has been launched in the low tritium concentration seawater as of today. At around 10 am, 32 flounders, which had been in normal seawater, were transferred to the tank containing seawater with a tritium concentration of approx. 30 Bq/L. We will follow the progress hereafter.
