

<Marine Organism Rearing Log>

9 AM, December 16, 2022

Weather: Sunny

Water temperature: 17.7°C

In Fukushima, we hear news of snowfall here and there, the temperature of seawater in the tanks is warmer than room temperature at the rearing facility. Even in that situation, the flounders and abalones remains vital, an abalone was found dead, though. I wonder an injury might be the cause of death.

<Next report will be on December 19, 2022>

The number of dead abalones and the abalones removed for research				
	Death		Removed for research	
	12/10~16	Accumulated	12/10~16	Accumulated
Regular seawater①	0	0	0	0
Regular seawater②	0	2	0	0
Treated water added①	1	5	0	1
Treated water added②	0	3	0	0

*No dead flounders
