

<Marine Organism Rearing Log>

9 AM, December 23, 2022

Weather: Sunny

Water temperature: 17.6°C

100 days have passed since we started rearing marine organisms at the rearing and testing facility. The seawater in the tank has gradually evaporated resulting in a saline concentration of 3.6% (normally approx. 3.4%), which is a little high, so we adjusted it by adding tap water. This week we found that four abalone had expired, but all the flounder were fine.

<Next report will be on December 26, 2022>

The number of dead abalone / removed for research				
	No. of dead abalone		Removed for research	
	12/17~23	Accumulated	12/17~23	Accumulated
Regular seawater ①	1	2	0	0
Regular seawater ②	0	2	0	0
ALPS treated water added ①	1	7	0	0
ALPS treated water added ②	2	6	0	1

※No flounder deaths
