

<Marine Organism Rearing Log>

9 AM, February 27, 2023

Weather: Sunny

Water temperature: 18.0°C

The tanks in the rearing facility are kept at optimum temperature by the heater, however as the water temperature in the denitrification chamber drops along with the room temperature, the bacteria may become less active. In order to make the bacteria become more active, we set the heater in the denitrification chamber. We will take necessary measures while observing the effect.
