

<Marine Organism Rearing Log>

9 AM, March 9, 2022

Weather: Sunny

Water temperature: 18.2°C

The rearing test is different from the cultivation, because the rearing water will become radioactive waste. Therefore, we have to reduce the amount of food residues that cause the degradation of water quality as much as possible. So we feed them only a marginal amount for growth. The hungry flounders race to their food and bite into it.
