

<Marine Organism Rearing Long>

9 AM, March 27, 2023

Weather: Sunny

Water temperature: 18.1°C

Spring is at its hight. Cherry blossoms beside the rearing test facility are also in full bloom! Meanwhile, abalones and flounders spend their days relaxing, but the breeding staff is busy. Flounders and abalones have grown up after about six months of test rearing, and so the staff feeds them more accordingly and pays further attention to maintain the environment.
