

<Marin Organism Rearing Log>

9 AM, March 28, 2023

Weather: Sunny

Water temperature 18.5°C

As some abalones seemed unable to eat enough due to the water flow generated by the tidal stream simulator that took their feed away in the tank, we reduced the water flow so that the feed would not be drifted away. Now the feed is moderately scattered, and the adjustment looks to be working. It is like a coin game, where feed is not concentrated in one place.
