

<Marine Organism Rearing Log>

9 AM, April 19, 2023

Weather: Sunny

Water temperature: 17.3°C

Spring health checkup of the flounders being reared. Under the guidance of Mr. F, a researcher on flounder rearing, several caretakers carefully checked the condition of the back of the upper jaw and the base of the gills of flounders that were sleeping under anesthesia one by one. After checking, the back of the upper jaw and the base of the gills were disinfected with salt and returned to the tanks.
