

<Marine Organism Rearing Log>

9 AM, April 20, 2023

Weather: Sunny

Water temperature: 18.7°C

Notes for health check of flounders: Observe the concentration and duration of anesthesia (danger of overapplication). Check inside the palate thoroughly with a light. The examination should be done quickly as sharp teeth are dangerous when they wake up from anesthesia. Above all, handle flounders carefully so as not to hurt them.
