

<Marine Organism Rearing Log>

9AM, April 25, 2023

Weather: Sunny

Water temperature: 18.7°C

It has been warm recently, and sometimes outside temperature even exceeded 30°C in Fukushima city. Ambient temperature sometimes exceeded 25°C in this Sousou area too, and all of these changes show transition from one season to the next. Although the water temperature in the tanks is constantly around 18°C, we changed the temperature setting of air conditioner responding to the rise of room temperature inside the facility to prepared for the evaporation of rearing water.
