

<Marine Organism Rearing Log>

9 AM, May 17, 2023

Weather: Sunny

Water temperature: 18.4°C

Some of the visitors to the marine organism rearing test facility do not have enough time to enter the facility, and observe the rearing status from outside the windows instead. We display information about the tritium uptake and excretion test results above the window frames. We hope this will be of some help to them.
