

<Marine Organism Rearing Log>

9 AM, May 25, 2023

Weather: Sunny

Water temperature: 17.9°C

The flounder is often known as the Ninja of the sea. They ambush their preys by hiding under sand or matching the body color with their surroundings. The body color varies depending on rearing density, presence or absence of sand, body conditions, and quality of the eyes, etc. In the breeding test, there are whitish and blackish ones even in the same color tank.
