

<Marine Organism Rearing Log>

9 AM, May 26, 2023

Weather: Sunny

Water temperature: 18.7°C

The scientific name of flounder, *Paralichthys olivaceus*, is originated from the olive-colored (olivaceus) coastal (paralios) fish (ichthys). In Japanese, it is also known as “Tekkui” or “Okuchi,” and small flounders are sometimes called “Soge.”

<Next report will be on May 29, 2023>

The number of dead abalones and removed for research				
	No. of dead abalones		Removed for research	
	5/19-5/25 (No.)	Survival Rate (%, Accumulated)	5/19- 5/25 (No.)	Accumulated (No.)
Regular seawater①	0	75.5	0	0
Regular seawater②	3	72.9	0	0
ALPS treated water added①	1	70.3	0	0
ALPS treated water added②	5	63.1	0	1

* For accuracy, counted from Friday of the previous week to Thursday.

* No dead flounders
