

<Marine Organism Rearing Log>

9 AM, June 5, 2023

Weather: Sunny

Water temperature: 18.7°C

We measured flounders last December. It has been about six months since then, so we are planning to do it again this month. Prior to this, we conducted a preliminary exercise with flounders at the training facility to confirm the measurement procedures and to check new items. The flounders born last spring were about 30 centimetres long and weighed about 250 grams.
