

<Marine Organism Rearing Log>

9 AM, June 29, 2023

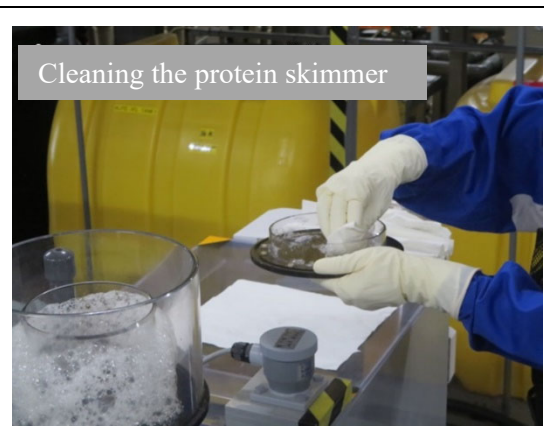

Weather: Sunny

Water temperature: 18.3°C

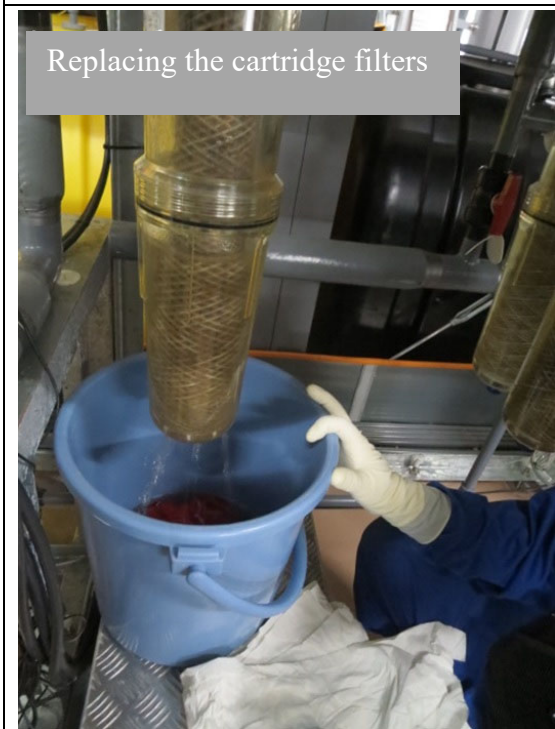

As we have mentioned several times before, maintaining a liveable environment for the flounder and abalone is a difficult task. Five to six keepers check on their health every day and manage the water quality carefully, such as by cleaning the tanks and maintaining the purification equipment.

Cleaning the bottom of abalone tank

Cleaning the protein skimmer

Replacing the cartridge filters

Checking water quality
