

<Marine Organism Rearing Log>

9 AM, August 2, 2023

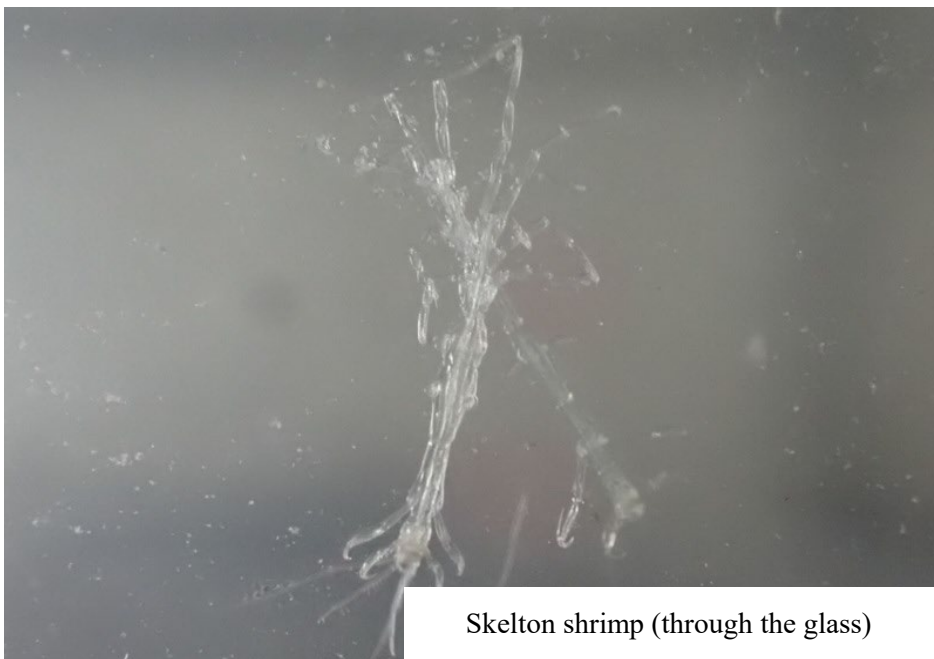

Weather: Sunny

Water temperature: 17.6°C

This is an underwater photo taken with a newly purchased camera of a flounder in a tank for which the tritium concentration has been adjusted to about 1,300Bq/l.. The photo was taken with the camera's underwater mode, so even the pattern and fins of the flounder are clearly visible. We also took a close-up of a Skelton shrimp that was introduced in the log on February 2.

Flounder in a tank with ALPS-treated water
