

< Marine Organism Rearing Log >

August 4, 2023 9:00 a.m.

Weather: Sunny

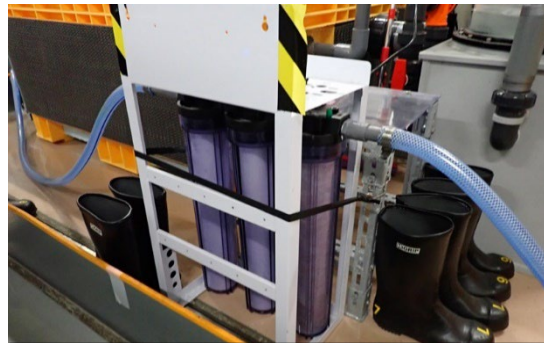

Water temperature: 17.8°C

The amount of seawater in the aquarium gradually decreases due to cleaning and sampling to check water quality. We have to periodically replenish that amount with water taken from the sea. Yesterday, we filtered the seawater obtained for this purpose to clean it and then transferred it into storage tanks.

(Next report will be on August 7)

Collecting seawater from near the power station and bringing it in by truck

Filtration to remove impurities

Filtered seawater is stored in dedicated tanks
