

<Marine Life Rearing Log>

9 AM, August 21, 2023

Weather: Sunny

Water temperature: 18.3°C

The flounder are all lined up in the tank facing the same direction. River fish will face upstream to catch food flowing downstream, and it appears the flounder all ended up in this alignment after positioning themselves to better see the feed floating down from the water surface. It almost looks like someone is giving orders in this tank!
