

<Marine Organism Rearing Log>

9 AM, August 23, 2023

Weather: Sunny

Water temperature: 18.1°C

We placed abalone in a transparent rearing enclosure in order to photograph them more closely. We plan to submerge this case in the rearing tank and leave it for a while in the same conditions as the rearing environment, and after the abalone have settled down, we will observe their movement and take close-ups.
