

<Marine Life Rearing Log>

9 AM, September 25, 2023

Weather: Cloudy

Water temperature: 18.6°C

In order to keep conditions more sanitary we have decided to start wearing special shoes in the breeding and testing facility this month. It is a little troublesome to change into these special shoes at the entrance of the facility, but we are committed to helping the flounder and abalone live healthfully and comfortably and preventing germs that could harm them from being brought into the facility is an example of the daily improvements we are making.
