

<Marine Life Rearing Log>

9 AM, September 26, 2023

Weather: Cloudy

Water temperature: 18.5°C

The seawater in the breeding tanks must be treated as radioactive liquid waste in accordance with law. For this reason, a weir has been installed to prevent leakage outside the facility. In addition, a step has been built to prevent tripping when stepping over the weir. Our first priority must be to ensure the safety of the keepers if we're going to take good care of the flounder and abalone.
