

<Marine Organism Rearing Log>

9 AM, November 9, 2023

Weather: Sunny

Water temperature: 17.5°C

We have explained that ammonia, which is the primary cause of deterioration in the quality of rearing seawater, is "excreted by flounder in their urine." However, we have recently learned that the overwhelming majority of ammonia excreted by flounder comes not from their urine, but from their gills.
