

<Marine Organism Rearing Log>

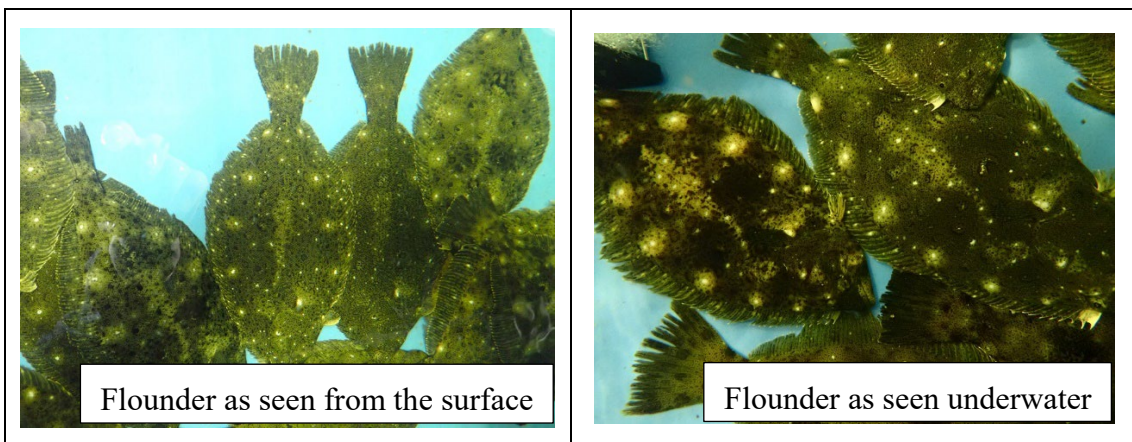

9 AM, November 10, 2023

Weather: Sunny

Water temperature: 18.4°C

The tanks at the rearing and testing facility has been brightened with LED lights since last month. The light reaches the bottom of the tanks, and the skin color of the flounder looks a little brighter when viewed from the water surface. However, when viewed with an underwater camera, it looks the same as before. This is the magic of water and light.

<Next report will be on November 13>
