

<Marine Organism Rearing Log>

9 AM, November 28, 2023

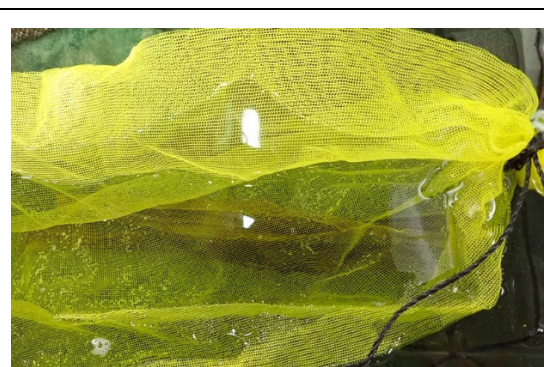

Weather: Sunny

Water temperature: 18.7°C

When it comes to feeding kelp on a regular basis, there are many things to worry about, such as ascertaining the amount of kelp eaten by the abalone, the amount to be fed to them, feeding methods, and how to prevent dried kelp from dissolving in the water and degrading the rearing environment. It all begins with trial and error at the training and rearing facility.

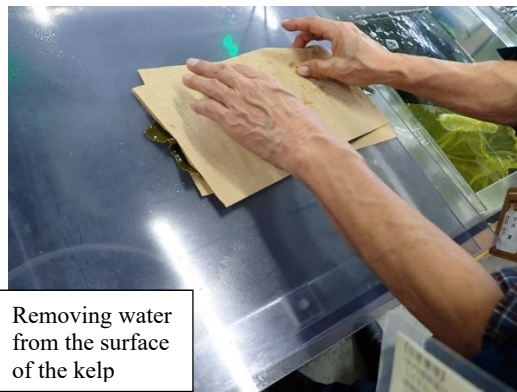

Measuring the weight of commercially available dried kelp

**“Urukashi”** in seawater

Urukasu: Soaking in water to absorb moisture (Tohoku dialect)

Removing water from the surface of the kelp

Measuring the weight of kelp after absorbing water
