

- On July 19, the telescopic device was delivered to the Unit 2 reactor building, as an appearance inspection of the telescopic device and preparations for carrying the device inside the reactor building was completed.
- On July 24, works commenced to connect the telescopic device to the X-6 penetration connection structure and connection pipe, and the installation was completed today, on July 25.
- Going forward, we will proceed with the installation of ancillary equipment and preparation for pre-service inspections.
