

- Now that the replacement of cameras, pre-consideration and final check of procedures for the resumption of work have been completed, trial retrieval of fuel debris has resumed since October 28.
- On October 28, the isolation valve of X-6 penetration structure was opened on 9:08 a.m., and the guide pipe and push pipe ① and ② were inserted. (At the point when the work was completed, the end jig was 90 cm away from the PCV)
- We will continue to remain vigilant and prioritize safety as we aim to complete decommissioning.

Resumption of trial retrieval at the Fukushima Daiichi Nuclear Power Station
