

- On April 22, the fuel debris sample was placed inside a transportation box after determining that it could be retrieved.
- As soon as preparations are completed, the transportation box will be placed inside an indoor transportation container on April 23 thereby completing the second fuel debris trial retrieval. (Placing of the fuel debris sample inside the indoor transportation container marks the completion of the trial retrieval process)

The sampled fuel debris at the bottom of the transportation box

End jig grasping the fuel debris
(photographed from above the enclosure)
