

Extension of Co-operation Agreement with Sellafield Ltd., UK

September 12, 2025

Tokyo Electric Power Company Holdings, Inc.

Fukushima Daiichi Decontamination & Decommissioning Engineering Company

In September 2014, Tokyo Electric Power Company Holdings, Inc. (hereinafter referred to as, “TEPCO HD”) signed a co-operation agreement with Sellafield Ltd., a UK firm that engages in the decommissioning of reactors and radioactive waste facilities, in accordance with which experience and expertise pertaining to decommissioning is shared. The original term of the agreement was five years and then it has been renewed approximately every five years thereafter while making continuous revisions. TEPCO HD hereby announces that a ceremony was held on September 11 (local time) at the Sellafield site (Seascale, Cumbria, UK) to celebrate the second agreement extension that was agreed upon in April 2025.

*Sellafield Ltd.: Subsidiary of the UK Nuclear Decommissioning Authority (NDA) which was founded in 2005.

Is engaged in the decommissioning of the Windscale nuclear reactor as well as facilities that pose a high risk of radiation leaks, referred to as legacy facilities, as well as the implementation of risk mitigation measures.

■ Agreement overview

The objective of the agreement is to leverage lively information exchanges to solve issues common to both companies in order to move steadily forward with decommissioning in a safer manner. The areas of expertise on which information is shared includes site operation and management, environmental monitoring, radiation protection, project management, design engineering, stakeholder communications and engagement, and procurement strategies.

Since FY2018, TEPCO HD has been dispatching its employees to Sellafield Ltd., and through these exchanges, Sellafield Ltd. has provided us with advanced and useful knowledge for the decommissioning work at the Fukushima Daiichi Nuclear Power Station.

Comments from attendees

- Akira Ono, President, Fukushima Daiichi Decontamination & Decommissioning Engineering Company

We are extremely pleased to have maintained a cooperative relationship with Sellafield in the field of decommissioning for approximately 11 years since signing a co-operation agreement in 2014.

The cooperation to date has been a major force in advancing our decommissioning work. By incorporating international experience and technology, we have achieved results that contribute to the creation of a more reliable and safe decommissioning process. Furthermore, by sharing Japan's efforts and achievements, we have built a relationship of mutual learning.

Additionally, the interaction between personnel and the technical skill that has been cultivated through this cooperation will strengthen our foundation of human resources that will be responsible for decommissioning into the future. And, giving back to the regional communities by leveraging the knowledge and skill we have acquired will enable us to contribute to sustainable development in the region and provide peace of mind to its inhabitants.

The extension of this agreement is a new departure point for further deepening and developing this relationship of mutual benefit. Through continued cooperation between TEPCO and Sellafield, we shall further promote international initiatives and steadily move forward with the decommissioning of Fukushima Daiichi Nuclear Power Station.

- Euan Hutton, CEO, Sellafield Ltd.

Very few places in the world have decommissioning challenges akin to those at Sellafield.

By working together with TEPCO, we can unlock new technology and techniques. Over the years we have had reciprocal visits and workshops, and we've welcomed secondees from TEPCO to the Sellafield site.

It's been great to welcome Ono-san to Sellafield. I was able to return the hospitality I was shown when I visited the Fukushima Daiichi site 18 months ago.

It's inspiring to hear the progress being made over there. We have many similar challenges.

This visit reflects the strength and importance of global collaboration in our industry.
