Fukushima Daiichi Nuclear Power Station　Plant Parameters

As of 5:00 on May 24 2012

[Note]
Some indicators might not be functioning properly beyond the normal condition for usage affected by the earthquake and subsequent events. We comprehensively evaluate situation in plants using all the available information from indicators and also focusing on trends, taking uncertainty of indicators into consideration.

【Information about measurements】
※1：Instrument failure
※2：Continuously monitoring the status（Meters which showed some fluctuation in the records but were not concluded as malfunction and of which the transition of the records are under observation.）
※3：In case that the instrument indicates minus hydrogen density, "0%" is recorded.
(Because there's the possibility of minus indication due to the instrumental precision when hydrogen density is very low.)
