

Nuclide analysis results of ocean soil

Reference

(data aggregation : 3/25)

Place of Sampling	3km offshore of Haramachi-ku	3km offshore of Odaka-ku	8km offshore of Odaka-ku		
Time of Sampling	Mar 23, 2012 10:10 AM	Mar 23, 2012 9:40 AM	Mar 23, 2012 9:20 AM		
Detected Nuclides (Half-life)	Radioactivity density (Bq/kg·moist soil)				
I-131 (about 8 days)	ND	ND	ND		
Cs-134 (about 2 years)	32	360	25		
Cs-137 (about 30 years)	44	500	32		

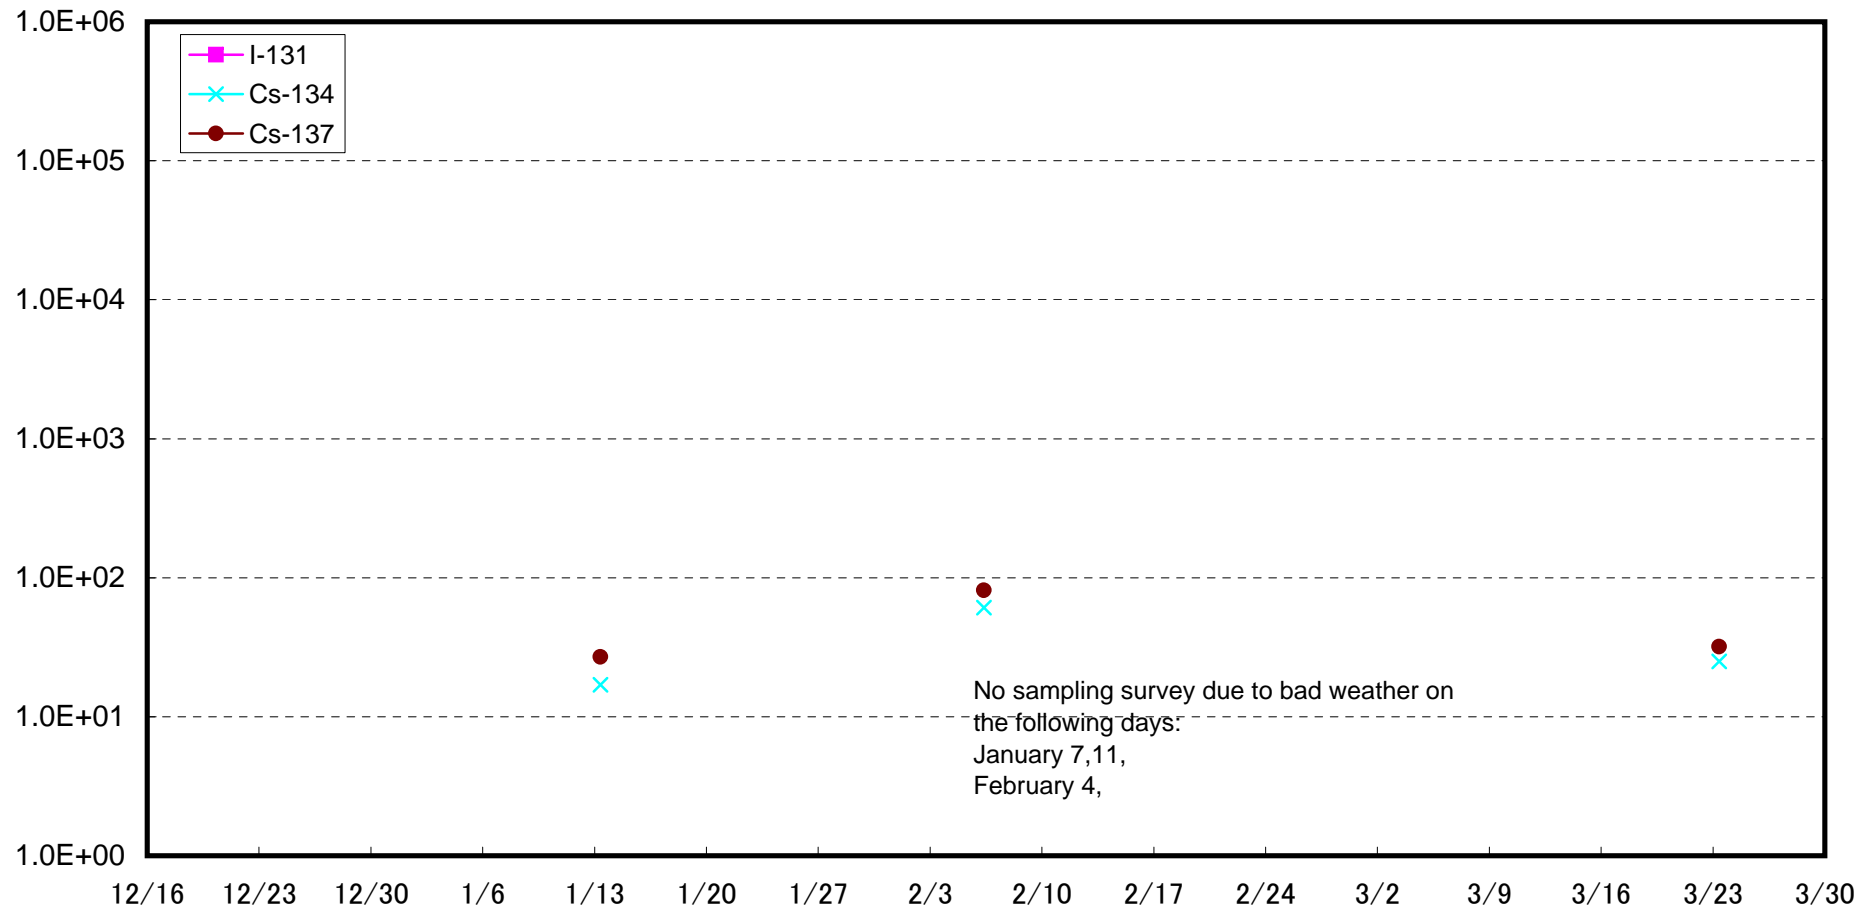

* Data of other nuclides are under evaluation.

* "ND" means the sampled data is below measurable limit.

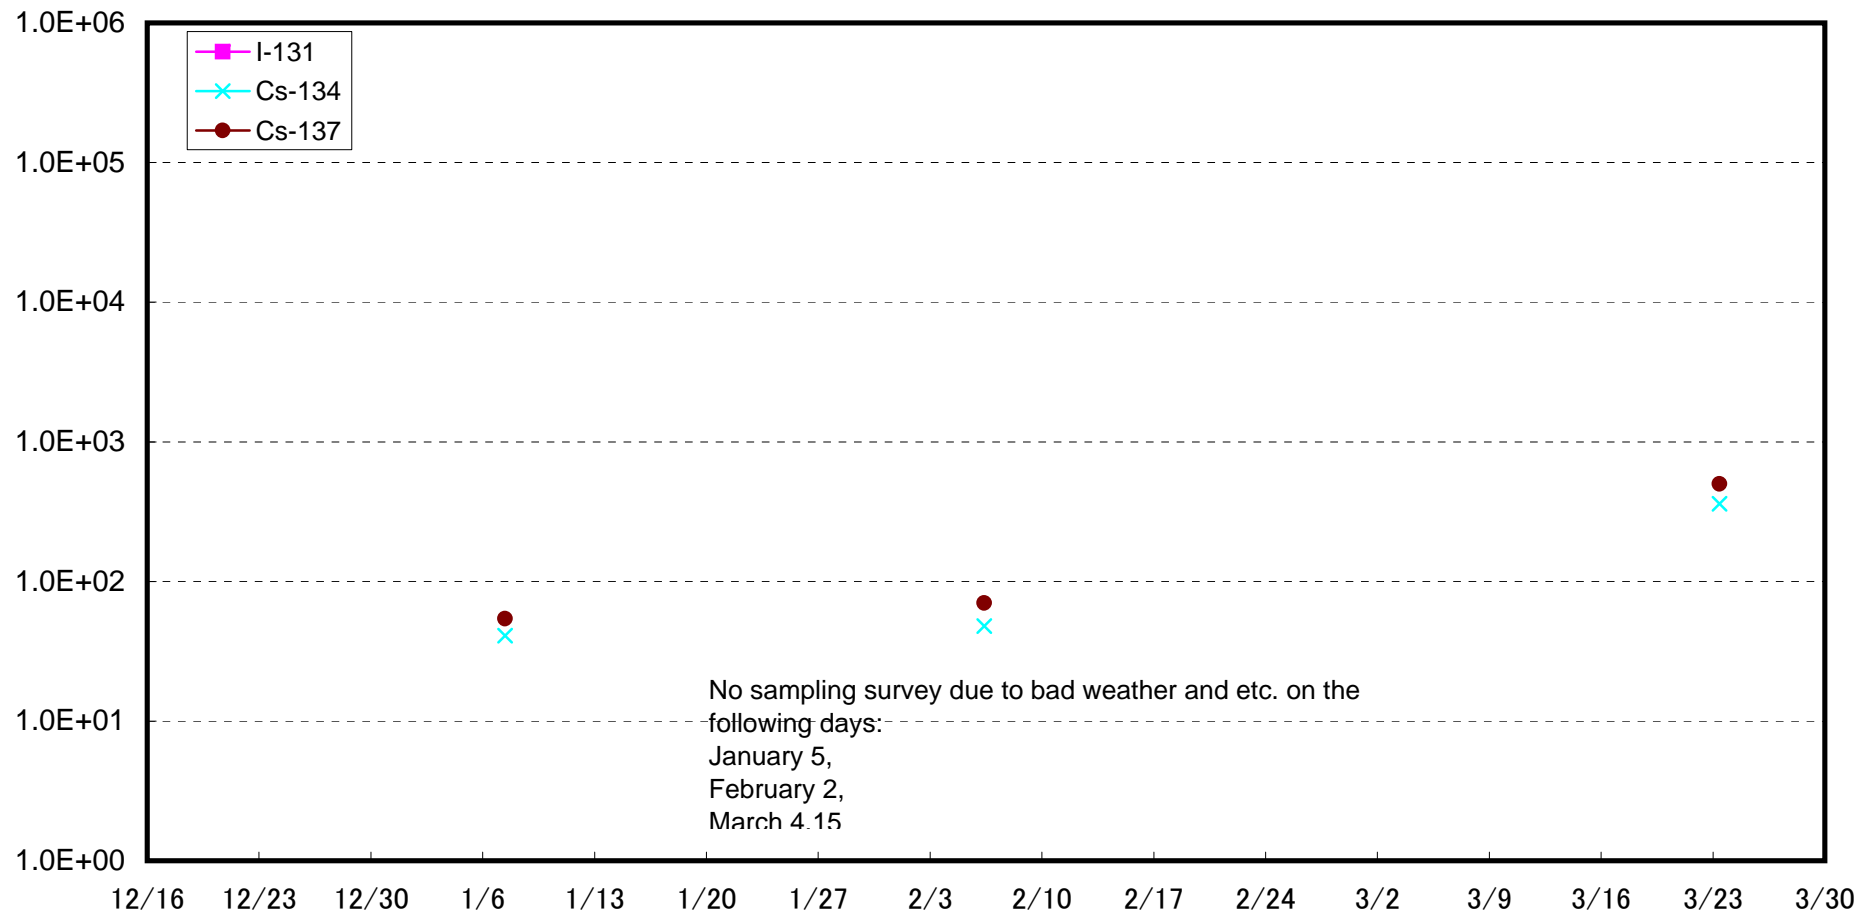

I-131: approx. 6Bq/kg·moist soil)

Please note that these nuclides are sometimes detected even when they are below the limits, contingent on the detector or samples.

Radioactivity Density of Ocean Soil around approx. 8km offshore of Odaka Ward (Bq/kg (moist soil))

Radioactivity Density of Ocean Soil around approx. 3km offshore of Odaka Ward (Bq/kg (moist soil))

Radioactivity Density of Ocean Soil around approx. 3km offshore of Haramachi Ward (Bq/kg (moist soil))
