

Nuclide analysis results of ocean soil

Reference

(Data summarized on April 23)

Place of Sampling	Around 10km offshore of Fukushima Daiichi Nuclear Power Station				
Time of Sampling	Apr 21, 2012 10:30 AM				
Detected Nuclides (Half-life)	Radioactivity density (Bq/kg·moist soil)				
I-131 (approx. 8 days)	ND				
Cs-134 (approx. 2 years)	18				
Cs-137 (approx. 30 years)	20				

* Data of other nuclides are under evaluation.

* "ND" means the sampled data is below measurable limit.

I-131: approx. 2Bq/kg·moist soil)

Please note that these nuclides are sometimes detected even when they are below the limits, contingent on the detector or samples.
