April 30,2015
Tokyo Electric Power Company

- Followed by preparation of dismantling building cover which began on March 16, anti-radiation-dispersing agent (hereafter described as "agent") is planned to be sprayed from May 15 by roof panel penetration method.
- For dismantling the building cover, anti-radiation-dispersing will be conducted discreetly and safety would be prioritized.
- As for the detailed work and the data radioactive material monitoring, they will be posted on "Daily report" on TEPCO's website, as well as be reported to the media. Also cases in which warning alarm goes off at monitoring posts or dust monitors will be immediately reported.
