

Set up of Manned Heavy Machinery on the upper side of Unit 4 Reactor Building In the Fukushima Daiichi Nuclear Power Station

On Nov. 26, 2011, we started the debris removal work on the upper side of Unit 4 Reactor Building. We started from the debris (roof, poles and beams) removal work on the upper southern side of Reactor Building Operating Floor (hereinafter "Opeflo", and currently we changed to the removal work on the upper northern side of Opeflo. From the end of Apr. 2012, we will set up a manned small heavy machinery for the removal of debris on the Opeflo, and we will continue the work.
