1 In accordance with the preventive measures, identification and determination of radioactivity density were conducted based on main peaks, Evaluation of radioactivity density were re-evaluated based on radiative balance. Furthermore, Transcription error has been modified.

2 Iodine (I-131, I-132, I-133) is evaluated only for volatile. Cesium (Cs-134, Cs-136, Cs-137) and cobalt (Co-58) are evaluated only for particulate. Other nuclides are evaluated as sum of volatile and particulate. In the course of re-evaluation, we separately evaluated the nuclides, which were detected through the filter of volatile and particulate.

. E - means . x 10 -

In the case of more than 2 nuclides, summation of scaling factor for each statutory density is compared to 1.

1 In accordance with the preventive measures, identification and determination of radioactivity density were conducted based on main peaks, Evaluation of radioactivity density were re-evaluated based on radiative balance. Furthermore, Transcription error has been modified.

2 Iodine (I-131, I-132, I-133) is evaluated only for volatile. Cesium (Cs-134, Cs-136, Cs-137) and cobalt (Co-58) are evaluated only for particulate. Other nuclides are evaluated as sum of volatile and particulate. In the course of re-evaluation, we separately evaluated the nuclides, which were detected through the filter of volatile and particulate.

. E - means . x 10 -

In the case of more than 2 nuclides, summation of scaling factor for each statutory density is compared to 1.

1 In accordance with the preventive measures, identification and determination of radioactivity density were conducted based on main peaks, Evaluation of radioactivity density were re-evaluated based on radiative balance. Furthermore, Transcription error has been modified.

2 Iodine (I-131, I-132, I-133) is evaluated only for volatile. Cesium (Cs-134, Cs-136, Cs-137) and cobalt (Co-58) are evaluated only for particulate. Other nuclides are evaluated as sum of volatile and particulate. In the course of re-evaluation, we separately evaluated the nuclides, which were detected through the filter of volatile and particulate.

. E - means . x 10 -

In the case of more than 2 nuclides, summation of scaling factor for each statutory density is compared to 1.

※1 In accordance with the preventive measures, ①Identification and determination of radioactivity density were conducted based on main peaks, ②Evaluation of radioactivity density were re-evaluated based on radiative balance. Furthermore, ③Transcription error has been modified.

※2 Iodine (I-131, I-132, I-133) is evaluated only for volatile. Cesium (Cs-134, Cs-136, Cs-137) and cobalt (Co-58) are evaluated only for particulate. Other nuclides are evaluated as sum of volatile and particulate. In the course of re-evaluation, we separately evaluated the nuclides, which were detected through the filter of volatile and particulate.

※ O.OE-O means O.O x 10-O

※ In the case of more than 2 nuclides, summation of scaling factor for each statutory density is compared to 1.

※ 1 In accordance with the preventive measures, ①identification and determination of radioactivity density were conducted based on main peaks, ②Evaluation of radioactivity density were re-evaluated based on radiative balance. Furthermore, ③Transcription error has been modified.

※ 2 Iodine (I-131, I-132, I-133) is evaluated only for volatile. Cesium (Cs-134, Cs-136, Cs-137) and cobalt (Co-58) are evaluated only for particulate. Other nuclides are evaluated as sum of volatile and particulate. In the course of re-evaluation, we separately evaluated the nuclides which were detected through the filter of volatile and particulate.

※ O.OE-O means O.O x 10-O

※ In the case of more than 2 nuclides, summation of scaling factor for each statutory density is compared to 1.

※1 In accordance with the preventive measures, ①Identification and determination of radioactivity density were conducted based on main peaks.  
 ②Evaluation of radioactivity density were re-evaluated based on radiative balance. Furthermore, ③Transcription error has been modified.

※2 Iodine (I-131, I-132, I-133) is evaluated only for volatile. Cesium (Cs-134, Cs-136, Cs-137) and cobalt (Co-58) are evaluated only for particulate. Other nuclides are evaluated as sum of volatile and particulate. In the course of re-evaluation, we separately evaluated the nuclides, which were detected through the filter of volatile and particulate.

※ O.OE-O means O.O x 10-O

※ In the case of more than 2 nuclides, summation of scaling factor for each statutory density is compared to 1.

※1 In accordance with the preventive measures, ①Identification and determination of radioactivity density were conducted based on main peaks.  
 ②Evaluation of radioactivity density were re-evaluated based on radiative balance. Furthermore, ③Transcription error has been modified.

※2 Iodine (I-131, I-132, I-133) is evaluated only for volatile. Cesium (Cs-134, Cs-136, Cs-137) and cobalt (Co-58) are evaluated only for particulate. Other nuclides are evaluated as sum of volatile and particulate. In the course of re-evaluation, we separately evaluated the nuclides, which were detected through the filter of volatile and particulate.

※ O.OE-O means O.O x 10-O

※ In the case of more than 2 nuclides, summation of scaling factor for each statutory density is compared to 1.
