## TEPCO Plant Status of Fukushima Daini Nuclear Power Station (as of 3:00 pm on November 11, 2011)

Appendix

Unit 1  It is shutdown (at 2:48 pm on March 11)  It is rods are all inserted  If heat removal system(B) is on operation.  If heat removal system (A) is under restoration.  Coolant Filtering System is in operation (From gratternative heat removal function in cold autdown * (From March 14)  The operature in Suppression Chamber is stable 30 ). (On March 14, achieved below 100 )  ation (measure to decrease the pressure in PCV)  Received	Automatic shutdown (at 2:48 pm on March 11)  All control rods are all inserted  Residual heat removal system(A) is in operation. Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (From July 17) [Securing alternative heat removal function in cold shutdown]  Cold shutdown * (From March 14)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is stable (generally 30 ).(On March 14, achieved below 100 )  No ventilation (measure to decrease the pressure in PCV) implemented	Automatic shutdown (at 2:48 pm on March 11)  All control rods are all inserted  Residual heat removal system(A) is in operation. Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (From June 6) [Securing alternative heat removal function in cold shutdown] Cold shutdown * (From March 12)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is usual (generally 30 ).(Having maintained below 100 before the earthquake)  No ventilation (measure to decrease the pressure in PCV)	Unit 4  Automatic shutdown (at 2:48 pm on March 11)  All control rods are all inserted  Residual heat removal system(A) is in operation. Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (Fror June 4) [Securing alternative heat removal function in cold shutdownl  Cold shutdown * (From March 15)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is stable (generally 30 ).(On March 15, achieved below 100 )
I heat removal system(B) is on operation. I heat removal system (A) is under restoration. Coolant Filtering System is in operation (From g alternative heat removal function in cold atdown * (From March 14) ge of coolant in PCV Imperature in Suppression Chamber is stable 30 ).(On March 14, achieved below 100 ) ation (measure to decrease the pressure in PCV) d	All control rods are all inserted  Residual heat removal system(A) is in operation. Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (From July 17) [Securing alternative heat removal function in cold shutdown] Cold shutdown * (From March 14)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is stable (generally 30 ).(On March 14, achieved below 100 )  No ventilation (measure to decrease the pressure in PCV)	All control rods are all inserted  Residual heat removal system(A) is in operation. Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (From June 6) [Securing alternative heat removal function in cold shutdown] Cold shutdown * (From March 12)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is usual (generally 30 ).(Having maintained below 100 before the earthquake)	All control rods are all inserted  Residual heat removal system(A) is in operation. Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (Fror June 4) [Securing alternative heat removal function in cold shutdown] Cold shutdown * (From March 15)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is stable (generally 30 ).(On March 15, achieved below 100 )
I heat removal system(B) is on operation. I heat removal system (A) is under restoration.  Coolant Filtering System is in operation (From galternative heat removal function in cold atdown * (From March 14)  ge of coolant in PCV  Imperature in Suppression Chamber is stable 30 ).(On March 14, achieved below 100 )  ation (measure to decrease the pressure in PCV) d	Residual heat removal system(A) is in operation. Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (From July 17) [Securing alternative heat removal function in cold shutdown] Cold shutdown * (From March 14)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is stable (generally 30 ).(On March 14, achieved below 100 )  No ventilation (measure to decrease the pressure in PCV)	Residual heat removal system(A) is in operation. Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (From June 6) [Securing alternative heat removal function in cold shutdown] Cold shutdown * (From March 12)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is usual (generally 30 ).(Having maintained below 100 before the earthquake)	Residual heat removal system(A) is in operation. Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (Fron June 4) [Securing alternative heat removal function in cold shutdown] Cold shutdown * (From March 15)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is stable (generally 30 ).(On March 15, achieved below 100 )
I heat removal system (Å) is under restoration.  Coolant Filtering System is in operation (From galternative heat removal function in cold atdown * (From March 14)  ge of coolant in PCV  Imperature in Suppression Chamber is stable 30 ).(On March 14, achieved below 100 )  ation (measure to decrease the pressure in PCV) d	Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (From July 17) [Securing alternative heat removal function in cold shutdown] Cold shutdown * (From March 14)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is stable (generally 30 ).(On March 14, achieved below 100 )  No ventilation (measure to decrease the pressure in PCV)	Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (From June 6) [Securing alternative heat removal function in cold shutdown] Cold shutdown * (From March 12)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is usual (generally 30 ).(Having maintained below 100 before the earthquake)	Residual heat removal system (B) is on standby.  Reactor Coolant Filtering System is in operation (Fror June 4) [Securing alternative heat removal function in cold shutdown]  Cold shutdown * (From March 15)  No leakage of coolant in PCV  Water temperature in Suppression Chamber is stable (generally 30 ).(On March 15, achieved below 100 )
mperature in Suppression Chamber is stable 30 ).(On March 14, achieved below 100 ) ation (measure to decrease the pressure in PCV) d	Water temperature in Suppression Chamber is stable (generally 30 ).(On March 14, achieved below 100 )  No ventilation (measure to decrease the pressure in PCV)	Water temperature in Suppression Chamber is usual (generally 30 ).(Having maintained below 100 before the earthquake)	Water temperature in Suppression Chamber is stable (generally 30 ).(On March 15, achieved below 100 )
30 ).(On March 14, achieved below 100 ) ation (measure to decrease the pressure in PCV) d	(generally 30 ).(On March 14, achieved below 100 )  No ventilation (measure to decrease the pressure in PCV)	(generally 30 ).(Having maintained below 100 before the earthquake)	(generally 30 ).(On March 15, achieved below 100 )
d		No ventilation (measure to decrease the pressure in PCV)	No contilation (management of the control of the co

Emergency diesel generator (B) electricity from the emergency diesel generator (A)_(B) of Unit 2 emergency diesel generators (A)(H) are under restoration.	Emergency diesel generator (A)(B)  The emergency diesel generators (H) is under inspection.	Emergency diesel generator (A)(B)(H)	Emergency diesel generator (A) (B) (H)
At 5:35 pm on March 11, Occurrence of a Specific Incident Stipulated in Article 10 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (reactor coolant is leaked (increase of pressure in PCV))  At 6:33 pm on March 11, judged that no reactor coolant had been lost.  At 6:33 pm on March 11, Occurrence of a Specific Incident Stipulated in Article 10 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to remove residual heat)  At 1:24 am on March 14, Restored by the start of Residual Heat Removal System (B)  At 5:22 am on March 12, Occurrence of a Specific Incident Stipulated in Article 15 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure)  At 10:15 am on March 14, Restored by the decrease of the water temperature in Suppression Chamber below 100			
	At 6:33 pm on March 11, Occurrence of a Specific Incident Stipulated in Article 10 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to remove residual heat) At 7:13 am on March 14, Restored by the start of Residual Heat Removal System (B)		At 6:33 pm on March 11, Occurrence of a Specific Incident Stipulated in Article 10 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to remove residua heat) At 3:42 pm on March 14, Restored by the start of Residual Heat Removal System (B)
	At 5:32 am on March 12, Occurrence of a Specific Incident Stipulated in Article 15 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure) At 3:52 pm on March 14, Restored by the decrease of the water temperature in Suppression Chamber below 100		At 6:07 am on March 12, Occurrence of a Specific Incident Stipulated in Article 15 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure) At 7:15 am on March 15, Restored by the decrease of the water temperature in Suppression Chamber below 100
pm on March 14th at the MP 1 and 12:12 am on N	Fukushima Daiichi Nuclear Power Station. he site at Fukushima Daini Nuclear Power Station measured by	y MP remains below 5 μ Sv/h	ing Nuclear Emergency Preparedness (increase in
A ge of te of A ge of the of t	rticle 10 of the Act on Special Measures Concerning ancy Preparedness (reactor coolant is leaked (increase PCV))  In March 11, judged that no reactor coolant had been an March 11, Occurrence of a Specific Incident rticle 10 of the Act on Special Measures Concerning ancy Preparedness (loss of function to remove residual in March 14, Restored by the start of Residual Heat in (B)  In March 12, Occurrence of a Specific Incident rticle 15 of the Act on Special Measures Concerning ancy Preparedness (loss of function to suppress on March 14, Restored by the decrease of the water Suppression Chamber below 100  In mon March 14th at the MP 1 and 12:12 am on Material at the boundary) due to the influence by am April 3rd, radiation dose at the boundary of the second suppression of the second suppression of the second suppression of the second suppression chamber below 100  In March 14th at the MP 1 and 12:12 am on Material at the boundary) due to the influence by am April 3rd, radiation dose at the boundary of the second suppression of the second suppres	preparedness (reactor coolant is leaked (increase acroy) preparedness (reactor coolant is leaked (increase acroy) in March 11, judged that no reactor coolant had been are March 11, Occurrence of a Specific Incident acroy Preparedness (loss of function to remove residual normal March 14, Restored by the start of Residual Heat mr (B)  At 6:33 pm on March 11, Occurrence of a Specific Incident Stipulated in Article 10 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to remove residual heat)  At 7:13 am on March 14, Restored by the start of Residual Heat Removal System (B)  At 5:32 am on March 12, Occurrence of a Specific Incident Stipulated in Article 15 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure)  At 3:32 am on March 12, Occurrence of a Specific Incident Stipulated in Article 15 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure)  At 3:32 am on March 12, Occurrence of a Specific Incident Stipulated in Article 15 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure)  At 2:32 am on March 12, Occurrence of a Specific Incident Stipulated in Article 15 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure)  At 3:32 am on March 14, Restored by the decrease of the water Suppression Chamber below 100 .	At 6:33 pm on March 11, Occurrence of a Specific Incident ricicle 10 of the Act on Special Measures Concerning and March 11, judged that no reactor coolant had been with March 11, judged that no reactor coolant had been with March 11, Occurrence of a Specific Incident ricicle 10 of the Act on Special Measures Concerning and Preparedness (loss of function to remove residual heat) and March 14, Restored by the start of Residual Heat mm (B)  At 6:33 pm on March 11, Occurrence of a Specific Incident Stipulated in Article 10 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to remove residual heat) At 7:13 am on March 14, Restored by the start of Residual Heat Removal System (B)  At 5:32 am on March 12, Occurrence of a Specific Incident Stipulated in Article 15 of the Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress on March 14, Restored by the decrease of the water Suppression Chamber below 100 .  At 3:52 pm on March 14, Restored by the decrease of the water suppression Chamber below 100 .  The Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure)  At 3:52 pm on March 14, Restored by the decrease of the water temperature in Suppression Chamber below 100 .  The Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure)  At 3:52 pm on March 14, Restored by the decrease of the water temperature in Suppression Chamber below 100 .  The Act on Special Measures Concerning Nuclear Emergency Preparedness (loss of function to suppress pressure)  At 5:32 am on March 14, Restored by the decrease of the water temperature in Suppression Chamber below 100 .
