

Nuclide analysis results of ocean soil

Reference

(Data summarized on November 11)

| | | | | | |
|----------------------------------|--------------------------------------|-----------------------------|--|--|--|
| Place of Sampling | 15km offshore of Minami Soma city | 5 km offshore of Numanouchi | | | |
| Time of Sampling | Nov. 09, 2011 (Not sampled) | Nov. 09, 2011 7:40 AM | | | |
| Detected Nuclides (Half-life) | Density of sample (Bq/kg· wet soil) | | | | |
| I-131 (about 8 days) | - | ND | | | |
| Cs-134 (about 2 years) | - | 95 | | | |
| Cs-137 (about 30 years) | - | 120 | | | |

* Data of other nuclides are under evaluation.

* "ND" means the sampled data is below measurable limit.

(I-131: approx. 4Bq/kg· wet soil)

Please note that these nuclides are sometimes detected even when they are below the limits, contingent on the detector or samples.
