

Nuclide analysis results of ocean soil

Referenc

(Data summarized on December 18)

| | | | | | |
|-------------------------------|--------------------------------------|-------------------------------|--|--|--|
| Place of Sampling | Iwasawa offshore 3km | 8km offshore of Iwasawa shore | | | |
| Time of Sampling | 16-Dec-11 8:00 AM | 16-Dec-11 9:00 AM | | | |
| Detected Nuclides (Half-life) | Density of Sample (Bq/kg·moist soil) | | | | |
| I-131 (about 8 days) | ND | ND | | | |
| Cs-134 (about 2 years) | 150 | 290 | | | |
| Cs-137 (about 30 years) | 200 | 370 | | | |

* Data of other nuclides are under evaluation.

* "ND" means the sampled data is below measurable limit.

I-131: approx. 6Bq/kg·moist soil)

Please note that these nuclides are sometimes detected even when they are below the limits, contingent on the detector or samples.
